SKILLS

TypeScript
JavaScript
React
Next.js
GraphQL
React Native
Redux
REST APIs

TOOLS

GitHub Copilot
Claude Code
Agentic development
HTML
CSS
Tailwind
Storybook
Redux Toolkit
Tanstack Query
Apollo
Jest
Testing Library
MSW
Webpack 5
Prisma
PostgreSQL
MongoDB

EXPERIENCE

Deutsche Bank | Senior Frontend Engineer Jan 2025 - Present

- Own the Mutual Funds feature (20+ data-driven pages) in the bank's in-house platform replacing a multi-million-dollar vendor, from scoping with product to testing with operations teams.
- Wrote the repo's AI coding guidelines and built reusable agents for test generation and design-system migration, so AI-written code reuses shared helpers and follows team conventions.
- Architected the Apollo/GraphQL data layer with URL-driven query state and per-type cache policies, moving server state from Redux into Apollo's cache to remove duplicated data.
- Cut the deployment workflow from 25 to 11 minutes with Webpack 5 filesystem caching and thread-loader, better CI caching, faster tests, and more CPU for parallel test runs.
- Own post-release back-merges from the prod branch into long-term development, resolving divergent code from 15+ developers and coordinating backend teams in NYC and India.
- Built the platform's first shared component library, adopted team-wide. Introduced Redux Toolkit, React Hook Form, app-wide error handling, ESLint/Prettier/Husky, HMR, and lazy loading.
- Led a gradual design-system migration using Shadow DOM for style isolation, instead of a full rebuild; built a Module Federation proof of concept and presented the findings to management.

Bennie | Frontend Engineer Feb 2021 - Dec 2024

- Developed and maintained customer-facing software and mobile apps with React, TypeScript, Redux, and React Native; led internal tools development.
- Delivered reusable UI components by creating a company-wide design system with Storybook and MUI, enabling a reduction in development time for new features.
- Implemented unit, integration, and end-to-end tests with Jest, MSW, and Testing Library.
- Collaborated with cross-functional teams to scope and ship features; mentored junior engineers.

NS Dev | Software Engineer June 2019 - Mar 2021

- Built responsive web apps with SEO best practices, improving search rankings and retention.

PROJECTS

Avarts: Strava Fitness App | Fullstack Engineer 2025 - Present

- Built a multi-user fitness platform on the Strava API (web + iOS): GPS maps, heatmaps, trend charts, AI coaching insights. Strava-approved; live at [avarts.app](#) and on the App Store.
- Designed incremental Strava sync into Postgres (Prisma, Neon), serving reads from the DB; a QStash worker adds location data in batches to stay within Strava and Vercel rate limits.
- Implemented Strava OAuth with httpOnly JWT sessions, route guards, and a one-time-code deep-link handoff for iOS sign-in; offline support via service worker; Sentry and PostHog.

EDUCATION

App Academy Full-stack software engineering program 2020

The City College of New York Bachelor's in Mechanical Engineering 2017
