SKILLS

TypeScript
JavaScript
React
Next.js
GraphQL
React Native
Redux
REST APIs

TOOLS

HTML
CSS
Jest
MSW
Testing Library
Webpack 5
Apollo
Tailwind
MongoDB
Mixpanel
Launch Darkly
ChartJS
D3
Prisma
PostgreSQL
Redux Toolkit
Tanstack Query
RTK Query
Storybook
Ruby
Rails

EXPERIENCE

Deutsche Bank | Senior Frontend Engineer Jan 2025 - Present

- Cut Webpack 5 build times by 45% via filesystem cache, thread-loader, splitChunks tuning, and React Refresh-driven HMR, speeding up the inner loop for every engineer. Streamlined branching and post-release back-merge workflows to eliminate recurring merge pain.
- Owned a major financial product end-to-end across 20+ data-driven pages. Scoped with product, designed the Apollo/GraphQL fetch strategy, URL-driven state, backend-vs-frontend filtering calls, and shepherded releases through the Docker to GKE deployment pipeline.
- Inherited a codebase powering a 10+ feature financial operations platform with no reusable components. Established a shared component library, dead-code cleanup, and consistent patterns across every feature. Rolled out ESLint, Prettier, Husky pre-commit hooks, and a PR template that tightened code review across the team.
- Migrated ad-hoc form code onto React Hook Form as a single validated pattern reused across the financial product I own. Designed an application-wide error-handling strategy covering server, authorization, and app-level errors, replacing inconsistent failure UX with a predictable model.
- Designed and validated a TypeScript Module Federation POC to split the monolithic React SPA into independently deployable shells, reducing cross-team coupling.
- Reduced repository vulnerabilities by triaging and patching dependency CVEs across the monolith. Mentored junior engineers through code reviews, weekly UI/UX syncs, and pair-debugging, accelerating their ramp on a complex financial domain.

Bennie | Frontend Engineer Feb 2021 - Dec 2024

- Utilized React, TypeScript, JavaScript, React Native, and Redux to develop and maintain robust customer-facing software, contributing to a company's growth.
- Led the frontend development of internal tools, resulting in a 40% increase in overall team efficiency and a significant reduction in work hours for the data ops team.
- Delivered reusable UI components by creating a company-wide design system with Storybook and MUI, enabling a reduction in development time for new features.
- Developed and maintained mobile applications with React Native on iOS and Android platforms.
- Implemented unit and integration tests with Jest, MSW, and Testing Library, which enhanced the reliability and maintainability of frontend applications and improved test coverage.

NS Dev | Software Engineer June 2019 - Mar 2021

- Built responsive web apps with SEO best practices to improve search rankings and retention.

EDUCATION

The City College of New York 2017
Bachelor's in Mechanical Engineering

Udemy & Frontend Masters online learning 2019 - Present
Pursued ongoing professional development in various technologies

App Academy 2020
Immersive software development course with a focus on full-stack and frontend web development
