

NIKOLAY SHATALOV

[Portfolio](#) [LinkedIn](#) [Github](#)

Senior Software Engineer, Frontend

Building complex, data-driven web products from architecture to production. Full-stack range across financial and consumer-facing applications, with a high bar for quality, testing, and maintainability.

GitHub Copilot

Claude Code

Agentic development

HTML

CSS

Tailwind

Storybook

Redux Toolkit

Tanstack Query

Apollo

Jest

Testing Library

MSW

Webpack 5

Prisma

PostgreSQL

MongoDB

EXPERIENCE

Deutsche Bank | Senior Frontend Engineer Jan 2025 - Present

- Owned a major financial product across 20+ data-driven pages, from scoping with product through production; designed the Apollo/GraphQL data layer with per-data-type cache policies and URL-driven state, deployed via Docker and GKE.
- Established the repo's AI coding guidelines and built reusable AI agents, including one for test generation, so AI output matches team conventions and testing standards, not generic code.
- Established a repo-wide migration strategy to a new design system, adopted gradually and sequenced ahead of a Module Federation microfrontend split blocked by leaky global styles.
- Inherited a 10+ feature platform with no reusable components and built its foundations: a shared component library and patterns, React Hook Form validation, app-wide error handling (server, auth, app-level), and code-quality tooling (ESLint, Prettier, Husky, PR templates).
- Triaged and patched dependency CVEs across the monolith; mentored junior engineers through code reviews, UI/UX syncs, and pair-debugging.

Bennie | Frontend Engineer Feb 2021 - Dec 2024

- Developed and maintained customer-facing software and mobile apps with React, TypeScript, Redux, and React Native; led internal tools development.
- Delivered reusable UI components by creating a company-wide design system with Storybook and MUI, enabling a reduction in development time for new features.
- Implemented unit, integration, and end-to-end tests with Jest, MSW, and Testing Library.

NS Dev | Software Engineer June 2019 - Mar 2021

- Built responsive web apps with SEO best practices, improving search rankings and retention.

PROJECTS

Avarts: Strava Fitness App | Fullstack Engineer 2025 - Present

- Shipped a multi-user fitness platform with real-time Strava sync, GPS maps, heatmaps, and AI coaching insights. Approved by Strava, live at [avarts.app](#) and on iOS.
- Built an async enrichment pipeline for per-activity weather and geolocation data outside the main request cycle. Secured with httpOnly JWT auth and Edge Middleware route guards.
- PostgreSQL + Prisma on Neon with Redis caching to minimize DB calls; designed and built REST API endpoints handling auth, activity sync, and data enrichment.

EDUCATION

The City College of New York 2017

Bachelor's in Mechanical Engineering

Udemy & Frontend Masters online learning 2019 - Present

Pursued ongoing professional development in various technologies

App Academy 2020

Immersive software development course with a focus on full-stack and frontend web development
